

Other triggers:(Things may happened)

- modem stops responding
- PDP drops
- network detach
- socket closed
- timeout
- unexpected response
- “ERROR” from modem
- “SEND FAIL”
- “CLOSED” indication

This is exactly how industrial LTE firmware works.

★ What the recovery sequence does

- ✓ Close socket
- ✓ Deactivate PDP
- ✓ Detach network
- ✓ Reboot modem
- ✓ Re-attach network
- ✓ Re-activate PDP
- ✓ Re-open socket
- ✓ Return to RUN

This guarantees:

- no stuck sockets
- no half-open PDP
- no ghost sessions
- no stale TCP handles
- no corrupted modem state

This is the **correct** LTE recovery pattern.
